

CROSS-TRACK INTEGRATION RECORD

HealthConnect Experience Lab - Week 6

1. TRACK COLLABORATED WITH

Data Science Track

2. PROJECT DEPENDENCY

Analytical findings inform modelling decisions

3. INFORMATION/OUTPUT RECEIVED

From Data Science Track:

- Feature importance from baseline model
- Confirmation of key predictors (previous_no_shows, booking_lead_days)
- Model performance metrics
- Understanding of class imbalance issues

4. INFORMATION/OUTPUT PROVIDED

To Data Science Track:

- Validated KPIs (No-Show Rate: 48%)
- Segment analysis (High-risk: 18.5%)
- Feature recommendations (previous_no_shows, booking_lead_days, waiting_time)
- Statistical validation results
- Data quality assessment

5. INTEGRATION ACTIVITY COMPLETED

Step 1: Shared Analysis Findings

- Provided Week 5 analysis summary
- Highlighted key patterns and trends

Step 2: Discussed Feature Engineering

- Reviewed which variables are most predictive
- Aligned on feature importance ranking

Step 3: Validated Findings

- Compared analytical insights with model results
- Confirmed alignment on key predictors

Step 4: Documented Exchange

- Created joint summary of findings
- Aligned on target variable definition

6. WHAT CHANGED AS A RESULT

Before Integration:

- Unvalidated analytical findings
- Unclear which features matter most
- Separate analysis and modelling

After Integration:

- Validated insights
- Clear feature importance ranking
- Aligned approach to no-show prediction
- Improved dashboard with model insights

7. EVIDENCE

- Updated dashboard with validated findings
- Feature recommendations document
- Email/meeting notes documenting exchange
- Joint summary of findings

8. IMPACT ON HEALTHCONNECT PROJECT

- Better understanding of no-show drivers
- More accurate prediction model

- Targeted recommendations
- Improved patient support strategy
